

The new Realist® from CoreLogic® is taking performance to the next level. Like its predecessor, Realist is setting a new standard by delivering a dynamic new way to look at the real estate market. Public record information is integrated with your MLS system allowing you to quickly research properties and listings; assess market conditions and trends; value homes and identify comparables; market for buyers and sellers; and create your own custom exports of information. Realist's property-centric focus allows you to have a complete view of the real estate market. It fuses numerous sources and categories of information with its underlying database of all properties. Only Realist can empower you to learn about an entire area, and then zero-in on the various types of information you need.

The next generation Realist is a logical extension of what you've come to know and trust — only better.
